

# Good QUESTIONS about Volodia Ring

**Reunion Island Space Initiative** together with **Space Renaissance International**

are giving a « SPACE-4-ALL » interactive presentation at the IAC-2024 Congress in Milano

This is about the VOLODIA RING a practical Space project to advance Agenda 2030 of the U.N.

Volodia Ring is a 1,000 people experimental artificial planet to help Mother Earth

**Authors :** \* Guy Pignolet <guy.pignolet@science-sainte-rose.net>  
together with Kaloune Judith Profil, René Lemayen, Willy Lameyer

and **YOU** who are reading this document

Planet Earth is in great difficulty to meet the 17 Sustainable Development Goals for the United Nations Agenda 2030. During the years 2023 and 2024, under the leadership of Space Renaissance International, the National Space Society and nearly one hundred world space organisations, it appeared that the introduction of an 18th SDG of Space-4-All to develop large space settlements in the Earth-Moon system may help to achieve successfully the Agenda 2030 of the United Nations.

**Reunion Island Space Initiative**, a partner of SRI and NSS, is developing « **VOLODIA RING** », a space habitat concept of the Stanford Torus type for one thousand persons, that appears to be feasible by the year 2030 if politicians and industry leaders worldwide follow the « **Apollo-Soyuz** » spirit implemented in 1975 during the cold war period by Vladimir « Volodia » Syromiatnikov.

If the aerospace industries in the whole world, instead of mostly manufacturing destructive war equipment, would cooperate to build the tools for a livable, peaceful and profitable future, in the present context of the digital environment, with internet global connectivity and artificial intelligence, a first Volodia Ring may be fully completed and operational by the year 2030.

With the contribution of many co-authors from Reunion Island, a one million people exceptional singularity on Planet Earth, and with the participation of contributors from the whole world, the « Volodia Ring » project will propose a roadmap, and **explore** the various technical, sociological and organizational aspects of this evolutionary public-private non-conventional perspective.
